

Kenneth Shaw

3rd Year Undergraduate at Georgia Institute of Technology: kshaw@gatech.edu

Research:

- GT IRIM RAIL Labs (Aug. 2018-present)
 - Worked in RAIL (Robot Autonomy and Interactive Learning) on ARL's Distributed and Collaborative Intelligent Systems and Technology (DCIST) project, specifically using heterogeneous robots and dynamic task allocation in simulation.
 - Creating a new Capture the Flag scenario in Unity3D for analysis.
- Research Assistant at USC ICT (Institute for Creative Technologies) (Summer 2018)
 - Visiting under Dr. Benjamin D. Nye, Director for Learning Science Research.
 - Originally a 10 week NSF REU, extended to 12 weeks for additional development.
 - Worked on the ONR MentorPal project in which we were researching and understanding the impacts of interactive mentor technology on career choices.
 - Created ML models for two new interactive mentors and web enabled frontend.
 - Field study at Naval Postgraduate School. (Results Pending)
 - Davis, D. M., Predovich, K.B., Spaulding, H. & Shaw, K. (2018). "Enhancing Menteeship: Improving Career Selection for Potential DoD Personnel". In the Proceedings of the SISO Fall Simulation Innovation Workshop, Orlando, Florida:SISO
- VIP (Vertically Integrated Projects) Lightning From Space: (Jan 2018-)
 - Developing new usage of a multi-modal communication platform using APRS as well as cellular for real-time, bidirectional communication from flight to ground.

Extracurricular:

- MIT Launch: Orama (Summer 2017)
 - Two-Factor Authentication with facial recognition API startup
 - Created an adapted dlib algorithm, frontend and communication for client side vision algorithm.
- ThermoFi Wireless Thermometer and Humidity sensor: (2015-present)
 - Worked to create and sell sensors that monitored the home.
 - Created a server (node.js) which showed monitoring information about the home. (temperature, humidity, air quality etc.)
- FRC Team 293 High School Robotics: (2013-2017 currently: advisor)
 - Lead Control Systems Engineer, President, Robot Driver, Inspector
 - Worked on workshops educating new members on programming.
 - Led many projects such as the Onboard Auto-Targeting System project for "Boulder"/Dodgeball Shot Aiming using OpenCV, on Fine Mechanism Angle Control and Custom Control Boards using TI HID Driver
- Bitcoin Mining: Worked to program early FPGAs to mine Bitcoins efficiently.
 - Admin and founding member of Cryptocurrency Collectors Club on Facebook (currently has 75,000+ members and a wealth of collated information)
 - Specialize in ML trading algorithms for short term positions.

Education:

- Georgia Tech: Computer Engineering/CS Minor in Intelligence (Grad: Spring 2020)
 - GPA: 4.0 (4.0 Scale)
 - ECE 2020 (Digital Logic Design), CS 1371 (Matlab), CS 1331 (Obj. Oriented Java), ECE 2036/2035 (Programming Hw/Sw Systems)/2026 (DSP), ECE 2031 (Digital Design Lab)/ ECE 2040 (Circuit Analysis)/ ECE 3020 (Math Found.), CS 1332 (Data Structures and Algorithms)
